

## Syllabus Course Program

# Programming technologies

**Specialty**

125 – Cybersecurity and information protection

**Institute**

Educational and Scientific Institute of Computer Science and Information Technology

**Educational program**

Cybersecurity

**Department**

Cybersecurity (328)

**Level of education**

Bachelor's level

**Course type**

Special (professional), Mandatory

**Semester**

3

**Language of instruction**

English

## Lecturers and course developers

**Andrii TKACHOV**

[andrii.tkachov@khpi.edu.ua](mailto:andrii.tkachov@khpi.edu.ua)

Candidate of Technical Sciences, senior researcher of the cyber security department of National Technical University "Kharkiv Polytechnic Institute".

The number of scientific publications: more than 60 publications, 25 articles in foreign publications and specialized publications of Ukraine, 6 patents for a useful model, guarantor of the educational and professional program of the first (bachelor) level of higher education. Leading lecturer in the disciplines: "Network Programming", "Development and Analysis of Algorithms", "Programming Technologies", "Programming Tools", "Web Security", "Fundamentals of Technical Information Protection", for undergraduate and graduate students.

[More about the lecturer on the department's website](#)

## General information

### Summary

The educational discipline "Programming technologies" is a mandatory educational discipline. The discipline is aimed at forming a theoretical and practical basis for students regarding modern approaches in the field of programming and their implementation in the work of web-oriented systems. The study of the discipline provides professional development and is aimed at researching the processes of discovering knowledge, mastering modern technologies and programming tools.

### Course objectives and goals

Study of programming technologies, acquisition by students of knowledge and skills in the field of algorithm development, creation, translation and debugging of application programs, use of libraries and modules to create lossless support for solving problems of analysis and protection of information systems.

### Format of classes

Lectures, laboratory classes, consultations, self-study. Final control - exam.

## Competencies

- GC-1. Ability to apply knowledge in practical situations.
- GC-2. Knowledge and understanding of the domain and understanding of the profession.
- GC-4. Ability to identify, state and solve problems in a professional manner.
- GC-5. Ability to search, process and analyze information.
- PC-1. Ability to apply the legislative and regulatory framework, as well as state and international requirements, practices and standards in order to carry out professional activities in the field of information and/or cyber security.
- PC-2. Ability to use information and communication technologies, modern methods and models of information security and/or cyber security.
- PC-3. Ability to use software and software-hardware complexes of means of information protection in information and telecommunication (automated) systems.
- PC-4. Ability to ensure business continuity in accordance with the established information and/or cyber security policy.
- PC-5. The ability to ensure the protection of information processed in information and telecommunication (automated) systems for the purpose of implementing the established information and/or cyber security policy.
- PC-6. The ability to restore the regular functioning of information, information and telecommunication (automated) systems after the implementation of threats, cyber attacks, failures and refusal of various classes and origins.
- PC-7. Ability to implement and ensure the functioning of complex information protection systems (complexes of regulatory, organizational and technical means and methods, procedures, practical techniques, etc.).
- PC-8. Ability to carry out incident management procedures, conduct investigations, provide them with an assessment.
- PC-9. Ability to perform professional activities based on the implemented information and/or cyber security management system.
- PC-10. Ability to apply methods and means of cryptographic and technical protection of information at objects of information activity.
- PC-11. Ability to monitor the processes of functioning of information, information and telecommunication (automated) systems in accordance with the established policy of information and/or cyber security.
- PC-12. Ability to analyze, identify and evaluate possible threats, vulnerabilities and destabilizing factors to the information space and information resources in accordance with the established policy of information and/or cyber security.

## Learning outcomes

- LO-1. Apply knowledge of state and foreign languages in order to ensure the effectiveness of professional communication;
- LO-2. Organize own professional activity, choose optimal methods and ways of solving complex specialized tasks and practical problems in professional activity, evaluate their effectiveness;
- LO-3. Use the results of independent search, analysis and synthesis of information from various sources for the effective solution of specialized tasks of professional activity.
- LO-4. Analyze, argue, make decisions when solving complex specialized tasks and practical problems in professional activity, which are characterized by complexity and incomplete determination of conditions, be responsible for the decisions made.
- LO-5. Adapt under the conditions of frequent changes in the technologies of professional activity, to predict the final result.
- LO-6. Critically understand the main theories, principles, methods and concepts in education and professional activity.
- LO-7. Act on the basis of the legislative and regulatory framework of Ukraine and the requirements of relevant standards, including international ones in the field of information and/or cyber security.
- LO-8. Prepare proposals for regulatory acts on ensuring information and/or cyber security.
- LO-9. Implement processes based on national and international standards for detection, identification, analysis and response to information and/or cyber security incidents.
- LO-10. Perform analysis and decomposition of information and telecommunication systems.

- LO-11. Perform analysis of connections between information processes on remote computer systems.
- LO-12. Develop threat and intruder models.
- LO-13. Analyze projects of information and telecommunication systems based on standardized technologies and data transmission protocols.
- LO-14. Solve the task of protecting programs and information processed in information and telecommunication systems by hardware and software tools and evaluate the effectiveness of the quality of the decisions made.
- LO-15. Use modern hardware and software of information and communication technologies.
- LO-16. Implement complex information security systems in the automated systems (AS) of the organization (enterprise) in accordance with the requirements of regulatory and legal documents.
- LO-17. Ensure the processes of security and functioning of information and telecommunication (automated) systems based on practices, skills and knowledge, regarding structural (structural-logical) schemes, network topology, modern architectures and models of security of electronic information resources with a reflection of relationships and information flows, processes for internal and remote components.
- LO-18. Use software and software-hardware complexes for the security of information resources.
- LO-19. Apply theories and methods of protection to ensure information security in information and telecommunication systems.
- LO-20. Ensure the functioning of special software to protect information from destructive software influences, destructive codes in information and telecommunication systems.
- LO-21. Solve tasks of provision and support (including: review, testing, accountability) of the access control system according to the stated security policy in information and telecommunication (automated) systems.
- LO-22. Solve the management procedures of identification, authentication, authorization of processes and users in information and telecommunication systems according to the established policy of information and/or cyber security.
- LO-23. Implement measures to prevent unauthorized access to information resources and processes in information and telecommunication (automated) systems.
- LO-24. Solve the problems of managing access to information resources and processes in information and telecommunication (automated) systems based on access management models (mandatory, discretionary, role-based).
- LO-25. Ensure the introduction of accountability of the access management system to electronic information resources and processes in information and telecommunication (automated) systems using event registration logs, their analysis and stated protection procedures.
- LO-26. Implement measures and ensure the implementation of processes of prevention of unauthorized access and protection of information, information and telecommunication (automated) systems based on the reference model of interaction of open systems.
- LO-27. Solve problems of data flow protection in information and telecommunication (automated) systems.
- LO-28. Analyze and evaluate the effectiveness and level of security of resources of various classes in information and telecommunication (automated) systems during tests in accordance with the established policy of information and/or cyber security.
- LO-29. Evaluate the possibility of realization of potential threats of information processed in information and telecommunication systems and the effectiveness of the use of complexes of protection means under the conditions of realization of threats of various classes.
- LO-30. Assess the possibility of unauthorized access to elements of information and telecommunication systems.
- LO-31. Apply protection theories and methods to ensure the security of elements of information and telecommunication systems.
- LO-32. Solve the tasks of managing the processes of restoring the regular functioning of information and telecommunication systems using backup procedures in accordance with the stated security policy.
- LO-33. Solve the problems of ensuring the continuity of business processes of the organization on the basis of risk management theory.
- LO-34. Participate in the development and implementation of an information security and/or cyber security strategy in accordance with the goals and objectives of the organization.
- LO-35. Solve the tasks of providing and supporting complex information security systems, as well as countering unauthorized access to information resources and processes in information and information-

telecommunication (automated) systems in accordance with the stated policy of information and/or cyber security.

LO-36. Detect dangerous signals of technical means.

LO-37. Measure the parameters of dangerous and interfering signals during the instrumental control of information security processes and determine the effectiveness of information security against leakage through technical channels in accordance with the requirements of regulatory documents of the technical information security system.

LO-38. Interpret the results of special measurements using technical means, monitoring the characteristics of information and telecommunication systems in accordance with the requirements of regulatory documents of the technical information security system.

LO-39. Carry out attestation (based on accounting and survey) of regime territories (zones), premises, etc. under the conditions of compliance with the secrecy regime, recording the results in the relevant documents.

LO-40. Interpret the results of special measurements using technical means, control of ITS characteristics in accordance with the requirements of regulatory documents of the technical information security system.

LO-41. Ensure the continuity of the event and incident logging process based on automated procedures.

LO-42. Implement processes of detection, identification, analysis and response to information and/or cyber security incidents.

LO-43. Apply national and international regulatory acts in the field of information security and/or cyber security to investigate incidents.

LO-44. Solve the problems of ensuring the continuity of the organization's business processes on the basis of risk management theory and the stated information security management system, in accordance with national and international requirements and standards.

LO-45. Apply early classes of information security and/or cyber security policies based on risk-based access control to information assets.

LO-46. Analyze and minimize the risks of information processing in information and telecommunication systems.

LO-47. Solve the problems of protection of information processed in information and telecommunication systems using modern methods and means of cryptographic protection of information.

LO-48. Implement and maintain intrusion detection systems and use cryptographic protection components to ensure the required level of information security in information and telecommunications systems.

LO-49. Ensure the proper functioning of the monitoring system of information resources and processes in information and telecommunication systems.

LO-50. Ensure the functioning of software and software-hardware complexes for detecting intrusions of various levels and classes (statistical, signature, statistical-signature).

LO-51. Maintain operational efficiency and ensure configuration of intrusion detection systems in information and telecommunication systems.

LO-52. Use tools for monitoring processes in information and telecommunication systems.

LO-53. Solve problems of software code analysis for the presence of possible threats.

LO-54. Be aware of the values of a civil (free democratic) society and the need for its sustainable development, the rule of law, the rights and freedoms of a person and a citizen in Ukraine.

## **Student workload**

The total volume of the course is 150 hours (5 ECTS credits): lectures - 32 hours, laboratory classes - 32 hours, self-study - 86 hours.

## **Course prerequisites**

Basics of programming.

## **Features of the course, teaching and learning methods, and technologies**

In the course of teaching the discipline, the teacher uses explanatory-illustrative (informational-receptive) and reproductive teaching methods. Presentations, conversations, and master classes are used

as teaching methods aimed at activating and stimulating the educational and cognitive activities of applicants.

## Program of the course

### Topics of the lectures

#### Topic 1. Introduction to the course.

Basic concepts and terms.

#### Topic 2. Modern programming technologies.

Overview and comparison of modern programming paradigms and technologies.

#### Topic 3. Modern development environments.

Integrated software development environments.

#### Topic 4. Work with data structures.

Data structures. Representation and use of data structures.

#### Topic 5. Working with files.

File access. File operations.

#### Topic 6. Basic modules.

Connecting modules. Use and layout of modules.

#### Topic 7. Object-oriented programming.

Paradigm of object-oriented programming. Principles, features.

#### Topic 8. Version control technologies.

Use of version control technologies in modern integrated programming environments.

### Topics of the workshops

Not provided for in the curriculum.

### Topics of the laboratory classes

#### Topic 1. Introduction to the course.

#### Topic 2. Modern programming technologies.

#### Topic 3. Modern development environments.

#### Topic 4. Work with data structures.

#### Topic 5. Working with files.

#### Topic 6. Basic modules.

#### Topic 7. Object-oriented programming.

#### Topic 8. Version control technologies.

### Self-study

A student's independent work is one of the forms of organization of learning, the main form of mastering educational material in free time from classroom training. During independent work, students study lecture material, do individual homework, prepare for tests, tests and exams. Students are also recommended additional materials (videos, articles) for self-study and analysis.

### Non-formal education

Within the framework of non-formal education, according to the relevant Regulation (<http://surl.li/pxssv>), the educational component or its individual topics may be taken into account in the case of independent completion of professional courses/trainings, civic education, online education, vocational training, etc.

In particular, certain topics of this component can be taken into account in case of successful completion of the following CISCO courses:

Python 1

<https://www.netacad.com/catalogs/learn?category=course>.

## Course materials and recommended reading

### Basic literature:

1. Python 3.10.2 documentation [Electronic resource]. – Access mode: <https://docs.python.org/3/>.
2. Java Platform Standard Edition 8 Documentation [Electronic resource]. – Access mode: <https://docs.oracle.com/javase/8/docs/>.
3. Microsoft C++, C, and Assembler documentation [Electronic resource]. – Access mode: <https://docs.microsoft.com/en-us/cpp/?view=msvc-170>.
4. WEB technologies [Electronic resource]: Educational and reference manual / S.P. Yevseiev, A.M. Tkachov, V.O. Alexeiev, Yu.M. Ryabukha – Kharkiv: KHNEU named after S. Kuznetsia, - Lviv: "New World - 2000" Publishing House, 2021. - 390 p.  
<https://drive.google.com/drive/u/1/folders/1wOTN8N-GBGO06AnvjQHU1SdBl3xCaUju>
5. Yevseiev S.P. CYBER SECURITY: CRYPTOGRAPHY WITH PYTHON: training. manual / S.P. Yevseiev, O.V. Shmatko, O.H. Korol - Kharkiv: "New World - 2000" Publishing House, 2021. - 120 p.  
<https://drive.google.com/drive/u/1/folders/1wOTN8N-GBGO06AnvjQHU1SdBl3xCaUju>

### Additional literature:

6. Python Tutorial [Electronic resource]. – Access mode : <https://www.tutorialspoint.com/python/index.htm>.
7. Java Tutorial [Electronic resource]. – Access mode: <https://www.tutorialspoint.com/java/index.htm>.
8. C++ Tutorial [Electronic resource]. – Access mode: <https://www.tutorialspoint.com/cplusplus/index.htm>.

## Assessment and grading

### Criteria for assessment of student performance, and the final score structure

Points are awarded according to the following ratio:

- laboratory work: 40% of the semester grade;
- independent work: 10% of the semester grade;
- control work: 10% of the semester grade;
- exam: 40% of the semester grade.

### Grading scale

Total points	National	ECTS
90–100	Excellent	A
82–89	Good	B
75–81	Good	C
64–74	Satisfactory	D
60–63	Satisfactory	E
35–59	Unsatisfactory (requires additional learning)	FX
1–34	Unsatisfactory (requires repetition of the course)	F

## Norms of academic integrity and course policy

The student must adhere to the Code of Ethics of Academic Relations and Integrity of NTU "KhPI": to demonstrate discipline, good manners, kindness, honesty, and responsibility. Conflict situations should be openly discussed in academic groups with a lecturer, and if it is impossible to resolve the conflict, they should be brought to the attention of the Institute's management.

Regulatory and legal documents related to the implementation of the principles of academic integrity at NTU "KhPI" are available on the website: <http://blogs.kpi.kharkov.ua/v2/nv/akademichna-dobrochesnist/>
