

## Syllabus Course Program

# Antivirus information protection

**Specialty**

125 – Cybersecurity and information protection

**Institute**

Educational and Scientific Institute of Computer Science and Information Technology

**Educational program**

Cybersecurity

**Department**

Cybersecurity (328)

**Level of education**

Bachelor's level

**Course type**

Special (professional), Mandatory

**Semester**

8

**Language of instruction**

English

---

## Lecturers and course developers

**Serhii YEVSEIEV**

[serhii.yevseiev@khpi.edu.ua](mailto:serhii.yevseiev@khpi.edu.ua)

Doctor of technical sciences, professor, head of the cyber security department of National Technical University "Kharkiv Polytechnic Institute".

The number of scientific publications: more than 350, including 42 utility model patents, 17 monographs, of which 9 are collective monographs, 31 textbooks, 4 of which bear the seal of the Ministry of Education and Science of Ukraine, 163 articles in foreign publications and specialized publications of Ukraine, with 61 of them are in the Scopus scientometric database. Leading lecturer in the disciplines: "Information security management", "Introduction to networks", "Security of banking systems", "Hybrid warfare and national security", "Audit and monitoring of corporate networks", "Blockchain: basics and application examples", "Fundamentals of smart contracts", "Basics of cyber security" for undergraduate and graduate students, Section "Methods and technologies of information security monitoring and auditing", "Methods of building post-quantum cryptosystems", "Latest technologies for ensuring cyber security based on blockchain technology" for postgraduate students.

[More about the lecturer on the department's website](#)

**Olha KOROL**

[olha.korol@khpi.edu.ua](mailto:olha.korol@khpi.edu.ua)

Candidate of technical sciences, associate professor, associate professor of the department of cyber security of National Technical University "Kharkiv Polytechnic Institute".

The number of scientific publications: more than 150, of which 14 are textbooks, 48 articles in foreign publications and specialized publications of Ukraine, 8 patents for a useful model, 9 in the Scopus scientometric database.

Leading lecturer in the disciplines: "Information security management", "State national security", "State information security", "Comprehensive training "Security of web applications"" for undergraduate and graduate students.

[More about the lecturer on the department's website](#)

## General information

### Summary

The educational discipline "Antivirus protection of information" is a mandatory educational discipline. The discipline is aimed at increasing the level of formation of students' knowledge and skills, which will create a theoretical and practical foundation necessary for the analysis of threats arising from the storage, processing and transmission of information in the field of information technologies.

### Course objectives and goals

Obtaining by students the necessary knowledge about the basics of the theory of protection of information resources in information systems with the use of modern methods and means of antivirus protection of information.

### Format of classes

Lectures, laboratory classes, consultations, self-study. Final control - credit test.

### Competencies

GC-1. Ability to apply knowledge in practical situations.

GC-2. Knowledge and understanding of the domain and understanding of the profession.

GC-3. Ability to abstract thinking, analysis and synthesis.

GC-4. Ability to identify, state and solve problems in a professional manner.

GC-5. Ability to search, process and analyze information.

GC-6. The ability to realize own rights and responsibilities as a member of society, to realize the values of a civil (free democratic) society and the need for its sustainable development, the rule of law, the rights and freedoms of a person and a citizen in Ukraine.

GC-7. The ability to preserve and multiply moral, cultural, scientific values and achievements of society based on an understanding of the history and patterns of development of the domain, its place in the general system of knowledge about nature and society and in the development of society, technologies, to use various types and forms of motor activity for active recreation and leading a healthy lifestyle.

PC-1. Ability to apply the legislative and regulatory framework, as well as state and international requirements, practices and standards in order to carry out professional activities in the field of information and/or cyber security.

PC-2. Ability to use information and communication technologies, modern methods and models of information security and/or cyber security.

PC-3. Ability to use software and software-hardware complexes of means of information protection in information and telecommunication (automated) systems.

PC-4. Ability to ensure business continuity in accordance with the established information and/or cyber security policy.

PC-5. The ability to ensure the protection of information processed in information and telecommunication (automated) systems for the purpose of implementing the established information and/or cyber security policy.

PC-6. The ability to restore the regular functioning of information, information and telecommunication (automated) systems after the implementation of threats, cyber attacks, failures and refusal of various classes and origins.

PC-7. Ability to implement and ensure the functioning of complex information protection systems (complexes of regulatory, organizational and technical means and methods, procedures, practical techniques, etc.).

PC-8. Ability to carry out incident management procedures, conduct investigations, provide them with an assessment.

PC-9. Ability to perform professional activities based on the implemented information and/or cyber security management system.

PC-10. Ability to apply methods and means of cryptographic and technical protection of information at objects of information activity.

PC-11. Ability to monitor the processes of functioning of information, information and telecommunication (automated) systems in accordance with the established policy of information and/or cyber security.

PC-12. Ability to analyze, identify and evaluate possible threats, vulnerabilities and destabilizing factors to the information space and information resources in accordance with the established policy of information and/or cyber security.

## **Learning outcomes**

LO-1. Apply knowledge of state and foreign languages in order to ensure the effectiveness of professional communication;

LO-2. Organize own professional activity, choose optimal methods and ways of solving complex specialized tasks and practical problems in professional activity, evaluate their effectiveness;

LO-3. Use the results of independent search, analysis and synthesis of information from various sources for the effective solution of specialized tasks of professional activity.

LO-4. Analyze, argue, make decisions when solving complex specialized tasks and practical problems in professional activity, which are characterized by complexity and incomplete determination of conditions, be responsible for the decisions made.

LO-5. Adapt under the conditions of frequent changes in the technologies of professional activity, to predict the final result.

LO-6. Critically understand the main theories, principles, methods and concepts in education and professional activity.

LO-7. Act on the basis of the legislative and regulatory framework of Ukraine and the requirements of relevant standards, including international ones in the field of information and/or cyber security.

LO-8. Prepare proposals for regulatory acts on ensuring information and/or cyber security.

LO-9. Implement processes based on national and international standards for detection, identification, analysis and response to information and/or cyber security incidents.

LO-10. Perform analysis and decomposition of information and telecommunication systems.

LO-11. Perform analysis of connections between information processes on remote computer systems.

LO-12. Develop threat and intruder models.

LO-13. Analyze projects of information and telecommunication systems based on standardized technologies and data transmission protocols.

LO-14. Solve the task of protecting programs and information processed in information and telecommunication systems by hardware and software tools and evaluate the effectiveness of the quality of the decisions made.

LO-15. Use modern hardware and software of information and communication technologies.

LO-16. Implement complex information security systems in the automated systems (AS) of the organization (enterprise) in accordance with the requirements of regulatory and legal documents.

LO-17. Ensure the processes of security and functioning of information and telecommunication (automated) systems based on practices, skills and knowledge, regarding structural (structural-logical) schemes, network topology, modern architectures and models of security of electronic information resources with a reflection of relationships and information flows, processes for internal and remote components.

LO-18. Use software and software-hardware complexes for the security of information resources.

LO-19. Apply theories and methods of protection to ensure information security in information and telecommunication systems.

LO-20. Ensure the functioning of special software to protect information from destructive software influences, destructive codes in information and telecommunication systems.

LO-21. Solve tasks of provision and support (including: review, testing, accountability) of the access control system according to the stated security policy in information and telecommunication (automated) systems.

- LO-22. Solve the management procedures of identification, authentication, authorization of processes and users in information and telecommunication systems according to the established policy of information and/or cyber security.
- LO-23. Implement measures to prevent unauthorized access to information resources and processes in information and telecommunication (automated) systems.
- LO-24. Solve the problems of managing access to information resources and processes in information and telecommunication (automated) systems based on access management models (mandatory, discretionary, role-based).
- LO-25. Ensure the introduction of accountability of the access management system to electronic information resources and processes in information and telecommunication (automated) systems using event registration logs, their analysis and stated protection procedures.
- LO-26. Implement measures and ensure the implementation of processes of prevention of unauthorized access and protection of information, information and telecommunication (automated) systems based on the reference model of interaction of open systems.
- LO-27. Solve problems of data flow protection in information and telecommunication (automated) systems.
- LO-28. Analyze and evaluate the effectiveness and level of security of resources of various classes in information and telecommunication (automated) systems during tests in accordance with the established policy of information and/or cyber security.
- LO-29. Evaluate the possibility of realization of potential threats of information processed in information and telecommunication systems and the effectiveness of the use of complexes of protection means under the conditions of realization of threats of various classes.
- LO-30. Assess the possibility of unauthorized access to elements of information and telecommunication systems.
- LO-31. Apply protection theories and methods to ensure the security of elements of information and telecommunication systems.
- LO-32. Solve the tasks of managing the processes of restoring the regular functioning of information and telecommunication systems using backup procedures in accordance with the stated security policy.
- LO-33. Solve the problems of ensuring the continuity of business processes of the organization on the basis of risk management theory.
- LO-34. Participate in the development and implementation of an information security and/or cyber security strategy in accordance with the goals and objectives of the organization.
- LO-35. Solve the tasks of providing and supporting complex information security systems, as well as countering unauthorized access to information resources and processes in information and information-telecommunication (automated) systems in accordance with the stated policy of information and/or cyber security.
- LO-36. Detect dangerous signals of technical means.
- LO-37. Measure the parameters of dangerous and interfering signals during the instrumental control of information security processes and determine the effectiveness of information security against leakage through technical channels in accordance with the requirements of regulatory documents of the technical information security system.
- LO-38. Interpret the results of special measurements using technical means, monitoring the characteristics of information and telecommunication systems in accordance with the requirements of regulatory documents of the technical information security system.
- LO-39. Carry out attestation (based on accounting and survey) of regime territories (zones), premises, etc. under the conditions of compliance with the secrecy regime, recording the results in the relevant documents.
- LO-40. Interpret the results of special measurements using technical means, control of ITS characteristics in accordance with the requirements of regulatory documents of the technical information security system.
- LO-41. Ensure the continuity of the event and incident logging process based on automated procedures.
- LO-42. Implement processes of detection, identification, analysis and response to information and/or cyber security incidents.
- LO-43. Apply national and international regulatory acts in the field of information security and/or cyber security to investigate incidents.

LO-44. Solve the problems of ensuring the continuity of the organization's business processes on the basis of risk management theory and the stated information security management system, in accordance with national and international requirements and standards.

LO-45. Apply early classes of information security and/or cyber security policies based on risk-based access control to information assets.

LO-46. Analyze and minimize the risks of information processing in information and telecommunication systems.

LO-47. Solve the problems of protection of information processed in information and telecommunication systems using modern methods and means of cryptographic protection of information.

LO-48. Implement and maintain intrusion detection systems and use cryptographic protection components to ensure the required level of information security in information and telecommunications systems.

LO-49. Ensure the proper functioning of the monitoring system of information resources and processes in information and telecommunication systems.

LO-50. Ensure the functioning of software and software-hardware complexes for detecting intrusions of various levels and classes (statistical, signature, statistical-signature).

LO-51. Maintain operational efficiency and ensure configuration of intrusion detection systems in information and telecommunication systems.

LO-52. Use tools for monitoring processes in information and telecommunication systems.

LO-53. Solve problems of software code analysis for the presence of possible threats.

LO-54. Be aware of the values of a civil (free democratic) society and the need for its sustainable development, the rule of law, the rights and freedoms of a person and a citizen in Ukraine.

## **Student workload**

The total volume of the course is 150 hours (5 ECTS credits): lectures - 24 hours, laboratory classes - 36 hours, self-study - 90 hours.

## **Course prerequisites**

Information security of the state, Comprehensive training.

## **Features of the course, teaching and learning methods, and technologies**

In the course of teaching the discipline, the teacher uses explanatory-illustrative (informational-receptive) and reproductive teaching methods. Presentations, conversations, and master classes are used as teaching methods aimed at activating and stimulating the educational and cognitive activities of applicants.

## **Program of the course**

### **Topics of the lectures**

**Topic 1. Introduction to the academic discipline. General concepts about computer viruses, the history of their emergence and development.**

Subject, goal and objectives of the course. Peculiarities of studying the discipline. General concepts about computer viruses, the history of their emergence and development. Portrait of a modern hacker. Basic concepts and definitions.

**Topic 2. Threats and vulnerabilities of wireless networks and mobile devices. Ways to solve problems of information protection in networks.**

The capabilities of Trojan programs to affect mobile devices. The history of the development of mobile viruses. Models of work with paid services. Protection of Android devices, iOS devices. Features of the OS for mobile devices. Threats and vulnerabilities of wireless networks. Ways to solve problems of information protection in networks.

**Topic 3. Protection against viruses.**

Computer viruses and problems of antivirus protection. Antivirus programs and complexes. Construction of a corporate network antivirus protection system. Means and methods of information protection in computer systems. Antivirus protection of information. Analysis of modern antivirus programs.

**Topic 4. Problems of network information security.**

Introduction to network information exchange. Analysis of network security threats. Ensuring information security of networks.

**Topic 5. Application of the technology of inter-network screens in the organization of anti-virus protection.**

Functions of inter-network screens (ME). Peculiarities of functioning of network screens at different levels of the OSI model. Network protection schemes based on firewalls.

**Topic 6. Organization of protection at the channel and session levels.**

Protocols for forming secure channels at the channel level. Protocols for forming secure channels at the session level. Protection of wireless networks.

**Topic 7. Organization of protection at the network level. IPsec protocol.**

IPsec security architecture. Protection of data transmitted using AN and ESP protocols. IKE cryptographic key management protocol. Peculiarities of implementation of IPsec tools.

**Topic 8. Protection infrastructure at the application level.**

Identity and access management. Organization of secure remote access. Access management based on a single sign-on scheme with Single Sign-On (SSO) authorization. Kerberos protocol.

The task of managing the network security system. Network security management architecture.

Functioning of the safety management system. Anti-virus security audit and monitoring.

## **Topics of the workshops**

Not provided for in the curriculum.

## **Topics of the laboratory classes**

**Topic 1. Malicious software. Basic types and general overview of computer viruses. Analysis of modern antivirus software products. Configuration of firewalls.**

**Topic 2. Malicious software. Using the "Buffer Overflow" vulnerability.**

**Topic 3. Malicious software. Exploitation of the "Error per unit" vulnerability.**

**Topic 4. Setting up a wireless network.**

**Topic 5. Basic WLAN setup with WLC.**

**Topic 6. Configuring WPA2 Enterprise WLAN with WLC.**

**Topic 7. Configuring and testing Site-to-Site IPsec VPN.**

**Topic 8. WEP/WPA2 PSK/WPA2 RADIUS.**

**Topic 9: Configuring server-based authentication using TACACS and RADIUS.**

## **Self-study**

A student's independent work is one of the forms of organization of learning, the main form of mastering educational material in free time from classroom training. During independent work, students study lecture material, do individual homework, prepare for tests, tests and exams. Students are also recommended additional materials (videos, articles) for self-study and analysis.

## **Non-formal education**

Within the framework of non-formal education, according to the relevant Regulation (<http://surl.li/pxssv>), the educational component or its individual topics may be taken into account in the case of independent completion of professional courses/trainings, civic education, online education, vocational training, etc.

Subjects are not considered for this component in case of successful completion of the courses.

## **Course materials and recommended reading**

### **Basic literature:**

1. Dudatiev A.V., Kaplun V.A., Semerenko V.P. Software protection. Part 1. Study guide. – Vinnytsia: VNTU, 2005. – 140 p.

## Assessment and grading

### Criteria for assessment of student performance, and the final score structure

Points are awarded according to the following ratio:

- laboratory work: 30% of the semester grade;
- independent work: 10% of the semester grade;
- control work: 20% of the semester grade;
- credit test: 40% of the semester grade.

### Grading scale

Total points	National	ECTS
90–100	Excellent	A
82–89	Good	B
75–81	Good	C
64–74	Satisfactory	D
60–63	Satisfactory	E
35–59	Unsatisfactory (requires additional learning)	FX
1–34	Unsatisfactory (requires repetition of the course)	F

## Norms of academic integrity and course policy

The student must adhere to the Code of Ethics of Academic Relations and Integrity of NTU "KhPI": to demonstrate discipline, good manners, kindness, honesty, and responsibility. Conflict situations should be openly discussed in academic groups with a lecturer, and if it is impossible to resolve the conflict, they should be brought to the attention of the Institute's management.

Regulatory and legal documents related to the implementation of the principles of academic integrity at NTU "KhPI" are available on the website: <http://blogs.kpi.kharkov.ua/v2/nv/akademichna-dobrochesnist/>
